Distinguished Guests Visit IAAAP

On October 23, 2018, seven distinguished visitors from regulating Government agencies came to the Iowa Army Ammunition Plant (IAAAP) for a tour of the facility and had a chance to learn and exchange information about the environmental clean-up program, the demolition projects, and the future plans for modernization.

They also attended the Restoration Advisory Board (RAB) Meeting at the West Burlington City Hall where they were able to participate with the local community to review and engage in conversations about IAAAP’s progress. The visit was successful and will help continue building on the relationships between IAAAP and the regulating Government agencies.

Stanley L. Rasmussen engaging with local community members and colleagues at the October RAB Meeting.

“It has been 10 years since I’ve been to a RAB meeting, and this is the most well attended RAB meeting I have ever been to, and is one of the most vigorous discussions I have ever seen. Thank you for those of you who are not Government employees who are here to volunteer your time and participate in this process. This is a really critical and important part of what we do everyday. You are representatives of your community to make sure you hold us accountable not only as regulators, but as community members as well so that we do the right thing everyday.”

- Lara Beasley, Environmental Support Branch Chief—United States Army Corps of Engineers

Distinguished Visitors:

- Stanley L. Rasmussen, DoD Region 7—Regional Environmental Coordinator, U.S. Army Regional Environmental & Energy Office
- Bruce Trautman, Acting Director—Iowa Department of Natural Resources (IDNR)
- Lara Beasley, Environmental Support Branch Chief—United States Army Corps of Engineers (USACE)
- Ed Chu, Deputy Regional Administrator—Environmental Protection Agency (EPA) Region VII
- Mary Peterson, Director, Superfund Division—EPA Region VII
- Preston Law, Chief, Federal Facilities & Post Construction Section—EPA Region VII
- Jim Stevens, Office of Regional Counsel—EPA Region VII
Happy New Year! 2018 was a successful year for IAAAP’s Environmental Restoration Program with our ongoing building demolitions, updated water treatment systems, improved bridges, and the completion of the Installation-Wide Remedial Investigation (RI) Work Plans.

With the RI Work Plans already in place, the Installation Wide Remedial Investigation (which involves sampling and data collecting) will begin and should be completed by the end of 2019. Energy efficient lights are being installed plant wide, which is not only environmentally friendly, but cost friendly as well. Modernization will also continue this year at IAAAP with various projects in the planning phase as well as the refurbishment of several miles of rail line.

Stay tuned for more exciting things to come in 2019!
