

PUBLIC NOTICE

The U.S. Army has released the Soils Feasibility Study and Proposed Plan for the clean up of contaminated soils temporarily stockpiled in the Corrective Action Management Unit (CAMU) at the Iowa Army Ammunition Plant (IAAAP). These documents are available for review at the Burlington Public Library, Danville City Hall, and the IAAAP Administration Building Visitor Welcome Center in Middletown, IA during normal operating hours.

The Feasibility Study describes the alternatives considered for this action and the Proposed Plan identifies the preferred alternative for cleaning up the contaminated soil. The plan proposes Low Temperature Thermal Desorption (LTTD) as the primary means of treatment with Bioremediation as a contingency if the LTTD technology proves ineffective.

This work will be conducted in accordance with the requirements of the Federal Facility (Interagency) Agreement between the Department of the Army and the U.S. Environmental Protection Agency. The EPA supports the preferred alternative for clean up as identified in the proposed plan.

The Army is interested in hearing public comments and concerns regarding soil clean up at the IAAAP. A public meeting will be held on July 9, 1998 at 7:00 pm and will be held at the PZAZZ Motor Inn, 3001 Winegard Dr., Burlington, IA 52601 to provide an opportunity to comment on the proposed alternative and to answer any questions regarding this clean up. Officials from the U.S. Army and the U.S. EPA will be available. Written comments and concerns should be directed to Mr. Rodger Allison at the Iowa Army Ammunition Plant, 17571 Hwy 79, Middletown, IA 52638-5000, telephone 319-753-7130, Email rallison@teamiowa.com. Comments may also be provided through IAAAP Restoration Advisory Board members. The public comment period will end July 20, 1998
